

Digital Evidence Asset Manager

QuickDME™

Safe & Secure with Instant Access

Secure, Scalable, End-to-End Digital Evidence Management Solution

QuickDME™ is a secure end-to-end digital evidence asset manager that is easy to integrate within or between Law Enforcement Agencies allowing them to automate and standardize the ingesting, storage, dissemination and tracking of all their digital assets involved in a case.

Supports All Digital Media Files

QuickDME™ supports all digital media files including video, images, audio, documents and programs. Additionally, its data management engine preserves the folder structure of the imported media to ensure proper play back of proprietary media files that require associated files to be in a specific location.

Customize to Match Your Policies, Procedures and Protocols

QuickDME™ also provides you the flexibility to customize the software to match your agencies policies and procedures through its password protected Administration Functions. Case Naming Syntax, Crime Types, Incident Naming Categories, which file types are hashed and by what hash algorithm, can all be customized to match the needs of your agencies protocols and standards. QuickDME™ also includes access security with auditing. This allows you to control who contributes, views, exports, or prints evidence by user permissions and case type.

Link Proprietary Files with the Appropriate Associated Players

Using the file association/player manager feature, QuickDME™ can be customized to open specific file types with the appropriate player/viewer for that file.

Interface

- Easy-to-use resizable multi-panel interface
- Customizable layouts using dock/undock panel options

Evidence Import

- Auto-detect newly mounted drive or browse to data location for ingest
