

Omnivore™

VIDEO & IMAGE CAPTURE | PASSWORD SECURE

Portable Digital Video Processing and Screen Capture

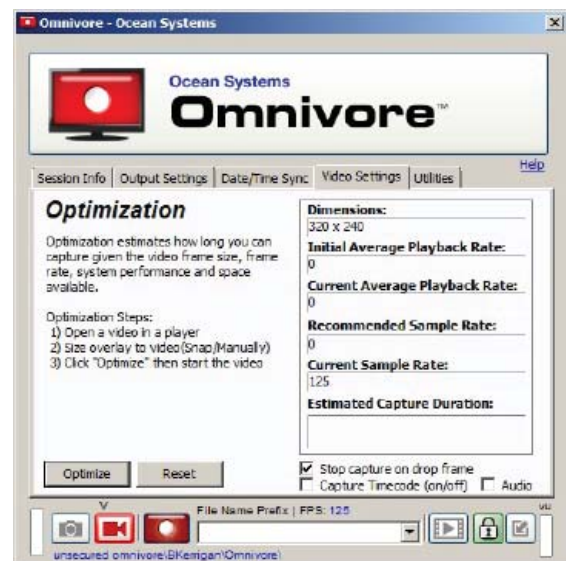

Version 3.3 - Now includes FFmpeg Processing and Reports

Designed specifically for the purpose of forensic video acquisition and processing, Omnivore is a password-protected 64GB USB3 flash drive that contains specialized capture and processing software that simplifies forensic video and image processing for all levels of users.

Omnivore software runs from the drive so it requires no installation or unlocking as you move between systems.

Process Native Files FFmpeg - Omnivore is no longer only for forensically sound screen capture! Now with Omnivore 3.3, you can also open files not captured with Omnivore and export them in various ways such as I-Frames only, uncompressed video, images, etc., using the FFmpeg Convert Engine. Omnivore also generates an easy-to-read report that documents your work.

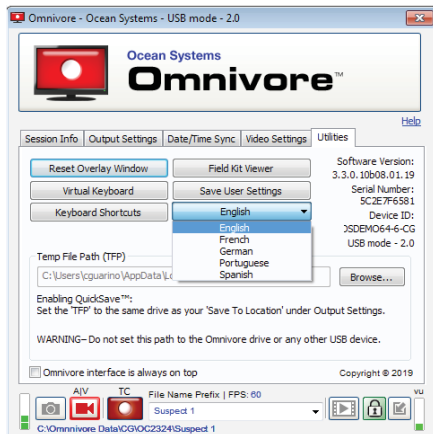

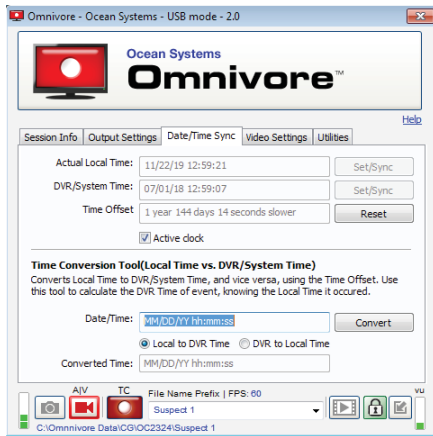

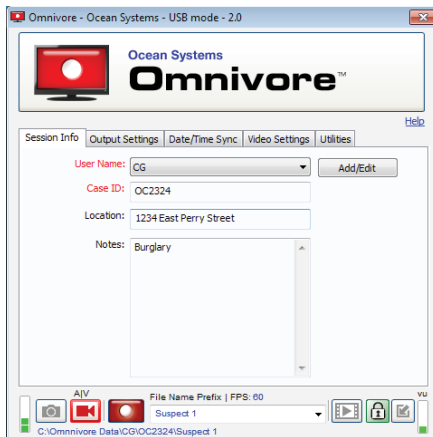

Active Audio Sync™ — a first of its kind technology, designed specifically to help investigators capture and process low frame rate video that has associated audio. Your video and audio remain in-sync and play back at the proper speed ... even with low frame rate and variable frame rate videos.

Outfit your agency with this powerful yet easy-to-use digital media processing solutions
